

Tropical Storm HERMINE QuickLook
Posted: 05:00 CDT 09/01/2016

NOAA and NOAA Partnership Stations Relative to the Storm

Storm Analysis

As of 9/1/2016 05:00 CDT, water level residuals are slowly rising along the Gulf Coast and range between 1.1 and 1.7 feet above normal tide levels. Winds generally remain between 5 and 15 knots with some gusts to 20 knots at times over the past 6 hours. Barometric pressure is fairly steady across the region.

Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional data, please see the Center for Operational Oceanographic Products & Services website. For more information or archived products and reports, please see the Storm QuickLook Homepage.

TROPICAL STORM HERMINE ADVISORY NUMBER 15
NWS NATIONAL HURRICANE CENTER MIAMI FL
400 AM CDT THU SEP 01 2016

...HERMINE HEADING TOWARD THE NORTH FLORIDA COAST...

WATCHES AND WARNINGS

CHANGES WITH THIS ADVISORY:

A Tropical Storm Warning has been issued for the U.S. east coast from Marineland Florida to South Santee River South Carolina.

A Tropical Storm Watch has been issued for the U.S. east coast from north of South Santee River to Surf City North Carolina.

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

A Hurricane Warning is in effect for...

- * Suwannee River to Mexico Beach

A Hurricane Watch is in effect for...

- * Anclote River to Suwannee River

- * West of Mexico Beach to Destin

A Tropical Storm Warning is in effect for...

- * Anclote River to Suwannee River

- * West of Mexico Beach to Destin

- * Marineland to South Santee River

A Tropical Storm Watch is in effect for...

- * North of South Santee River to Surf City

Interests along the United States east coast elsewhere in North Carolina should monitor the progress of this system.

For storm information specific to your area, including possible inland watches and warnings, please monitor products issued by your local National Weather Service forecast office.

DISCUSSION AND 48-HOUR OUTLOOK

At 400 AM CDT, the center of Tropical Storm Hermine was located ABOUT 250 MI SSW OF APALACHICOLA FLORIDA and ABOUT 275 MI OF TAMPA FLORIDA. Hermine is moving toward the north-northeast near 12 mph, and this motion with a slight increase in forward speed is expected during the next day or so. On the forecast track, the center of Hermine will be near the Florida coast in the warning area tonight or early Friday.

Maximum sustained winds remain near 60 mph with higher gusts. Some strengthening is anticipated, and Hermine is expected to be a hurricane by the time landfall occurs.

Tropical-storm-force winds extend outward up to 140 miles to the east of the center.

The estimated minimum central pressure from a NOAA Hurricane Hunter plane was 996 mb.

HAZARDS AFFECTING LAND

WIND: Hurricane conditions are expected to reach the coast within the warning area beginning tonight. Winds are expected to first reach tropical storm strength by this afternoon, making outside preparations difficult or dangerous. Preparations to protect life and property should be rushed to completion. Tropical storm conditions are possible in the tropical storm watch area by Friday night and Saturday.

STORM SURGE: The combination of a dangerous storm surge and the tide will cause normally dry areas near the coast to be flooded by rising waters moving inland from the shoreline. There is a danger of life-threatening inundation within the next 36 hours along the Gulf coast of Florida from Aripeka to Indian Pass. For a depiction of areas at risk, please see the Prototype National Weather Service Storm Surge Watch/Warning Graphic. Persons located within these areas should take all necessary actions to protect life and property from rising water. Promptly follow any instructions, including evacuation orders, from local officials.

The water could reach the following heights above ground if the peak surge occurs at the time of high tide...

Destin to Indian Pass...1 to 3 feet
Indian Pass to Chassahowitzka...4 to 7 feet
Chassahowitzka to Aripeka...2 to 4 feet
Aripeka to Bonita Beach...including Tampa Bay...1 to 3 feet
Florida-Georgia line to Cape Fear...1 to 3 feet

The Prototype National Weather Service Storm Surge Watch/Warning Graphic is a depiction of areas that would qualify for inclusion under a storm surge watch or warning currently under development by the National Weather Service and planned for operational use in 2017. This prototype graphic is available at www.hurricanes.gov/graphics_at4.shtml?wsurge

RAINFALL: Hermine is expected to produce storm total rainfall accumulations of 5 to 10 inches over portions of northwest Florida and southern Georgia through Friday, with possible isolated maximum amounts of 20 inches. On Friday and Saturday, Hermine is expected to produce totals of 4 to 8 inches with local amounts of 10 inches possible across portions of eastern Georgia, South Carolina, and eastern North Carolina through Saturday. These rains may cause life-threatening flash flooding.

TORNADOES: A few tornadoes are possible this afternoon into Friday morning over north Florida and southeast Georgia. The tornado risk will continue across the eastern CarolinaS from Friday morning into Friday night.

NEXT ADVISORY

Next intermediate advisory at 700 AM CDT.

Next complete advisory at 1000 AM CDT.
